

Messaging Solutions for a Smarter Future

## Quick Guide to Using TraiTel with Rockend Rest®

After creating a TraiTel account, enter the email address [rest@ttsms.com.au](mailto:rest@ttsms.com.au) into the default tab of the Rest® application Company Details. You will find this under "Other", "Utilities", "Company Details", Default Tab".

Emails must be sent from a registered email address, to [rest@ttsms.com.au](mailto:rest@ttsms.com.au). You can register sending email addresses in your account by logging in, selecting "Settings" then "SMS via Email Settings" - you will see the email address window there. You can add or remove email addresses as required.

The Headers X-Cellphone: and X-From-Cellphone: may be placed in the MIME headers, or in a **plain text body**.

The mail headers must also contain a valid Date, From and To field.

The subject must be left blank. If the subject contains text, the text will be pre-pended to the message.

Errors such as invalid account, insufficient funds, and frozen account, will be returned to the sender in an email from [messages@traitel.com.au](mailto:messages@traitel.com.au), to the sender's email address, following the format specified by the customer.

Also you will need to email [kundendienst@traitel.de](mailto:kundendienst@traitel.de) with your username and ask to have this activated for your account for it to work.
